Excerpt: . . . in 1 l. of distilled water, boil the solution until about one-fifth of it has evaporated, and add sufficient absolute water to bring the volume of the solution up to 1 l. when it is cold. Keep in a glass-stoppered bottle. If this solution becomes green, either in the stock bottle or in the retort when in use, a fresh solution must be made up. NITROGEN AS NITRITE It is generally admitted that nitrites found in pond or river water ordinarily come from the putrefaction of nitrogenous organic matter, usually of animal matter. In deep wells, the conditions are somewhat different. These waters may contain nitrites that have been formed by the deoxidation of nitrites in percolating through strata containing mineralreducing agents. The result of this determination should be kept in mind in deciding the quality of a water, and when nitrites are present, the results of the other determinations should be interpreted with greater strictness than when the nitrites are absent. Determination of Nitrogen as Nitrites. --Place 50 or 100 c. c. in a Nessler cylinder, add 1 drop of concentrate hydrochloric acid, 1 c. c. of sulphanilic-acid solution, and 1 c. c. of naphthylamine. hydrochloride. Mix thoroughly by stining with a glass rod, cover with a watch glass and set aside for 30 min. Prepare at the same time standard solutions containing known amounts of standard sodium nitrite diluted to 50 or 100 c. c. with absolute water, and the same amount...
